Relevant courses: Introduction to programming in Python, Introduction to UNIX

2011-2015: Grammar school Postova 9, Kosice, Slovakia

Work Experience

Frontend web developer, Bidding Fox Technologies, Brno (Apr 2023-)

I have worked as a junior UI engineer on pricing and bidding automation tools for e-commerce.
The technologies used are primarily *React + Redux + Typescript* with CSS-in-JS for styling. We've
also used the agile work methodology together with Atlassian products.
My biggest task and achievement as well, was a complete overhaul of the Pricing Settings page,
where I turned a lengthy user experience into a multi-part form that helped ease cognitive load.
It was also met with very positive reactions from the business team, as well as our users.
Another substantial task that I completed was an update of our codebase for React (17 →18.2) and
Typescript (3.4 →5.1), which included many changes in types-related packages in the codebase.

Freelance web developer (2022-)

During my time in web3, I have started working as a freelance frontend developer. I have been
sharpening my skills in modern JavaScript, React + TypeScript, Tailwind CSS, Next.js.
I made a portfolio aggregator, that displays web3 assets held in multiple wallets and networks.
I created a minting front-end dApp for an upcoming NFT project.
I am the sole developer behind the WenLaunch calendar app (wenlaunch.app).
I am the current maintainer of a web3 project's homepage (built on Squarespace).

Community manager and team member of a web3-based project (2021-2024)

I became involved with a group of like-minded enthusiasts on the Avalanche blockchain. My role
was in project and community management, internal processes and documentation, technical
responsibilities. We have released several NFT collections and other blockchain-related tools.

Administrative assistant in a Biochemistry laboratory (2019-2022, MUNI, Brno)

I was in charge of financial expenditures, purchasing, bookkeeping, financial reporting. I took an
active role in writing and implementing a Europe-wide research grant project.

Research assistant in a Biochemistry laboratory (2017-2022, MUNI, Brno)

Aside from research, I supervised 6 students to completing their graduation projects. I also
trained and mentored a number of students in maintaining laboratory processes and standards.

<u>Team member in a professional inventory company - part-time</u>
(2013-2016, Kosice Slovakia, Budapest Hungary, Brno Czechia)

I gained important experience in project management, team leadership, or error mitigation.

Skills and Interests

Computer and software proficiency
MS Office, Google Workspace, Unix, OriginPro, GnuPlot
HTML5, CSS3, JavaScript, TypeScript, beginner Python, Git, Web3 interactions
React (Class and Functional), Tailwind, Next.js, Zod, React-Redux, Strapi CMS, Ethers.js
